SUBJECT: PRESENTATION OF TRACKS WITH RUBBER AND IRON BELTS

Dear Sirs,

We are a company with over forty years experience in the construction level in the various sectors: agriculture, building and gardening.

Hereby we want to propose an innovative and reliable equipment, to be applied to walking tractors, mowers, flail mowers, rotary hoes etc. and upon specific request to other machines in the agricultural and in industry sector.

All versions of tracks have been designed to be easily applied to any model without the need to make modifications to the machine, thus ensuring the possibility of installation even on older machines.

The use of this tool greatly improves the performance of the machines, making it possible to operate in places with inaccessible or slippery ground, where it would be impossible to access with normal rubber or iron wheels.

Please find information and application examples of our models in the following pages.

Please do not hesitate to contact us for any further information.

All the track models and related media are available on our website: [www.agrizetagroup.it](http://www.agrizetagroup.it)

Best regards

AGRIZETA  
Silvia Bagnesi
