Descrizione

Pair of tracks with rubber belts width 160 mm, crown gear mounted directly on the wheel hub.
Guided stabilizer safety bars kit, integrated into the frame of the machine, to eliminate stress on the wheel hub, with supports and compensation springs that allow the 2 tracks to be independent of each other.

Suggested for **lawnmower machines from 16 to 24 HP** with ventral or front plate that operate on hilly terrain.

Recommended when there is the need to increase the performance of the operating machine, to have more grip on the ground and greater stability on uneven and sloping soils.

For green maintainers, for professional use in orchards, vineyards, olive groves, parks, etc.
